Checkpoint 4   **Tim**   16-11-2020   😊

Hadzhikolev, Kristian K.P.   2 months ago

In the meeting, we discussed my current progress in the project. I showcased the authentication as well as the design document. I should update my design document, write some user stories for the end of the sprint and add some service classes so the controllers are not directly connecting to the JPA Repository.

In the meeting we discussed my progress with the project as well as the design document. After the feedback, I have to change a bit the database and the ER Diagram. I should use the DOT Framework to justify my choice of front end and backend.

Checkpoint 2   **Tim**   28-09-2020   😊

In the meeting we discussed, what have I done since sprint 1. What should I focus on until the end of this sprint(Frontend and adding estimation and acceptance criteria to my user stories). What should I have achieved to pass the course. And how from sprint 3 on I should start working to complete user stories.

Checkpoint 1   Tim   07-09-2020   ☺

1. What have you done?(goals)
2. Feedback from teacher
3. What do I do now? (new goals)

In the meeting we discussed my idea for the individual project, the user stories, a bit about Java and how to use FeedPulse. I got feedback how to make the user stories more complete(adding 'so that' and acceptance criteria) and how to make small tasks and evaluate how much time and importance they have(prioritization and estimation). The feedback for Java was to check out composition over inheritance idea and to have in mind for future projects that inheritance is not always the answer.
